

SCREW WASHING PRESS

Washing & Compacting

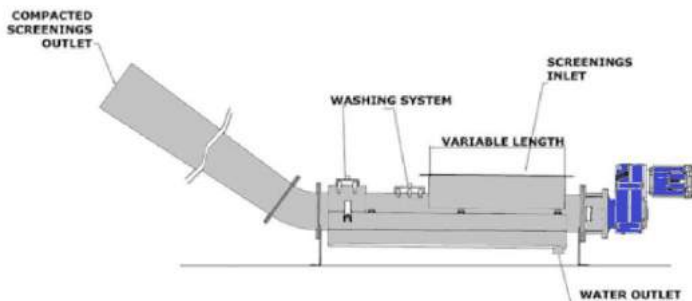

DESCRIPTION

EQUIP PRESS compactor combines two operations: washing and compacting screenings. Waste is dropped into the hopper connected with a tubular section with a perforated bottom for water discharge. Along the transport section, a spray bar washes the solids until the compacting section. The compaction is achieved by means of a "trunk" shaped discharge tube. The high compacting rate and the screen washing allows to reduce disposal costs and odor problems.

BENEFITS :

- ➔ High volume and weight reduction up to 60%
- ➔ Odor problems reduction
- ➔ Save on disposal cost
- ➔ Low & easy maintenance

| STANDARD MODELS | | | | |
|-----------------|--------|----------|---------------------|------------|
| MODEL | Screw | Hopper | Solid flow | Power (kW) |
| Equip Press 200 | DN 200 | variable | 2 m ³ /h | 1,5 |
| Equip Press 300 | DN 300 | variable | 5 m ³ /h | 3 |
| Equip Press 400 | DN 400 | variable | 8 m ³ /h | 5 |
