

UNDERGROUND WATER STORAGE

Lightweight honeycomb structure in recycled PVC

DESCRIPTION

EQUIP STORM is an ultra lightweight honeycombed modular structure, made from recycled PVC, it provides an underground storage facility for the application of storm water attenuation or infiltration.

BENEFITS

- ➔ High compressive strength with installation under all roads & car parks
- ➔ Reduced digging costs by minimizes the required volume of earthworks
- ➔ Easy & Speed installation
- ➔ Can also be used for water recycling and combining with irrigation systems
- ➔ Depth of tank invert reduced by using lateral supply
- ➔ Sizing by EquipWater available with calculations following your project

Recycled & Recyclable

Greatly reduces the risk of flooding when used as storm water storage
